

A Reminder on Plagiarism

Plagiarism

- One of the pitfall of learning programming is that plagiarism is **easy**
 - Very tempting, just a copy and paste!
 - But remember this: if you get caught by our plagiarism detecting program, you will face serious consequences
 - Our faculty policy is zero tolerance towards plagiarism – you will fail the course, and you will get a demerit on your transcript!

Plagiarism

- Not to mention that plagiarism won't get you through the exam! It will do the reverse!
 - If you plagiarize, you won't have enough programming practice to pass the exam (need 40 out of 100 marks)
 - On the other hand, if you allow your classmate to plagiarize from you, you are dooming him/her to fail! You are actually doing harm, not helping!
 - If someone asks you to plagiarize from him/her, he/she probably wants you to fail (?!)
 - **Again, say no to ~~drugs~~ plagiarism!**

Plagiarism

- And you can't plagiarize through the whole degree
 - How about the next course? How about the course after next?
 - You cover a lie with more lies, until you cannot cover it anymore
 - Don't get onto the slippery slope
 - Don't let your friend fall onto that slippery slope, if you are the one who supplies the "answer"
